\* Calls to O3 numbers cost no more than a national rate call to an O1 or O2 number and count towards any inclusive minutes in the same way as O1 and O2 calls

## **Nursing Services**

If you're considering a home nursing service, it's important you choose a reputable agency you can trust.

Unity's team of qualified and registered adult and children's nurses are skilled at delivering all levels of complex and clinical care in the home. Home nursing doesn't mean compromising on standards. Unity's nurses are compassionate, highly skilled and professional, ensuring the person you love is in the safest possible hands.

## Why Choose Home Nursing

Home nursing brings benefits to both the patient and the whole family. While a hospital stay is sometimes essential, being nursed at home means being able to relax in the warmth of your own home, without the stressful hustle and bustle of a busy ward.

Friends and family can visit when it's convenient, and can be more involved in the care of their loved one. For children, particularly those with life-limiting illnesses, being nursed at home provides greater levels of reassurance and security than can be found in impersonal hospital surroundings.

Whether you need short or longer term nursing, palliative care or help convalescing, home nursing could be the solution you're looking for. Unity's nurses work with both adults and children providing the highest standards of care and personal support.

## What's Involved

Unity's home nursing team works closely with you and all the medical professionals involved in the patient's care.

Specialist equipment such as beds and hoists is available through the health and social services, so your home can be properly equipped in advance.

Our nurses are highly trained and compassionate professionals, and are available to provide round-the-clock hospital-standard care in your own home. Included in Unity's home nursing services are:

- Respiratory management and ventilation
- Gastrostomy and nasogastric feeding
- Tracheostomy care
- Administering medication
- Bowel management
- Epilepsy management
- Head and spinal injury rehabilitation
